### Research Summary

Tonic water is a carbonated beverage that is distinctively bitter and slightly sweet, often used as a mixer in cocktails. It gets its characteristic bitter flavor from quinine, which was historically added for its antimalarial properties. While the quinine content in modern tonic water is much lower than in its medicinal origins, it remains a key ingredient, contributing to its unique taste. In addition to quinine, tonic water typically contains carbonated water, sweeteners, and sometimes citric acid. Tonic water is a common companion to gin, creating the classic cocktail known as a "gin and tonic." Its effervescence and bitter-sweet profile make it a popular choice for refreshing mixed drinks. There are also various flavored tonic waters available, offering additional taste dimensions to cocktails.
