Research Summary

A total artificial heart (TAH) is a mechanical device designed to replace the function of a failing human heart. This sophisticated device is implanted in the chest and is intended for individuals with end-stage heart failure who are not eligible for heart transplantation. The total artificial heart consists of two ventricular chambers and four artificial valves, mimicking the pumping action of the natural heart. Connected to an external power source and control unit, the TAH helps circulate blood throughout the body, providing life-sustaining support until a suitable donor heart becomes available for transplantation. Total artificial hearts play a crucial role in prolonging and sustaining the lives of individuals with severe cardiac conditions, acting as a bridge to transplant or, in some cases, as destination therapy for those who are not transplant candidates.

The major global manufacturers of Total Artificial Heart include BiVACOR, SynCardia, Jarvik Heart, CARMAT, AbioMed, etc. The global players competition landscape in this report is divided into three tiers.
