### Research Summary

A touch screen is a display interface that allows users to interact with electronic devices by touching the screen with their fingers or a stylus. Touch screens are widely used in various devices such as smartphones, tablets, laptops, ATMs, information kiosks, and interactive displays. They consist of a sensitive surface that can detect the touch of a finger or stylus and translate it into commands or actions. Touch screens utilize different technologies, including resistive, capacitive, infrared, and surface acoustic wave (SAW), each with its own advantages and limitations. Resistive touch screens are pressure-sensitive and can be operated with any object, while capacitive touch screens use the electrical charge of the human body to detect touch. Infrared touch screens detect interruption of infrared light beams, while SAW touch screens use ultrasonic waves to detect touch.
