Research Summary

A tourniquet is a medical device used to control or restrict blood flow to a specific part of the body, typically a limb, during surgical procedures or in emergency situations to prevent excessive bleeding. Tourniquets are commonly used in situations where direct pressure, bandages, or other methods may not effectively control severe bleeding. They consist of a band or strap, often made of elastic material, that is tightened around the limb to temporarily stop blood circulation. Tourniquets can be crucial in emergency medical settings, trauma care, and combat situations to prevent life-threatening hemorrhage until more comprehensive medical treatment can be administered. Proper application and timing of tourniquet use are essential, and their use is typically a last resort when other measures have proven ineffective in controlling bleeding.

The major global manufacturers of Tourniquet include Zimmer Biomet, Stryker, Delfi Medical, VBM Medizintechnik, Aneticaid, ATMOS MedizinTechnik, Ysenmed, Jiangsu Rooe Medical Technology, etc. The global players competition landscape in this report is divided into three tiers.
