Research Summary

A track-etched membrane is a specialized type of membrane filter that is created using a process known as track-etching. In this method, a polymer film is bombarded with high-energy particles, creating microscopic tracks or pores in the material. The size, density, and distribution of these pores can be precisely controlled during the manufacturing process. Track-etched membranes are commonly used in various applications, such as particle filtration, cell culture, and microorganism analysis. The uniform and well-defined pores allow for accurate filtration of particles based on size, making these membranes suitable for applications where precise separation or analysis is crucial. Track-etched membranes find use in scientific research, medical diagnostics, and industrial processes due to their reliability and ability to provide consistent results in filtration and separation tasks.

The major global manufacturers of Track-etched Membrane include GE Healthcare, Merck Millipore, GVS, It4ip, Sartorius, SABEU, Geyer GmbH, Oxyphen, Zefon International, Shanghai Nengthink, Sterlitech, Wuwei Kejin Xinfu, Chmlab Group, etc.
