Research Summary

Traction chains, also known as tire chains or snow chains, are devices designed to enhance the grip and traction of vehicle tires, particularly in challenging road conditions such as snow, ice, or mud. These chains consist of metal links that are attached to the tire tread, providing additional traction by biting into the slippery surface. Traction chains are commonly used in regions with harsh winter weather to improve vehicle stability and control, preventing slipping and skidding. They are especially useful for vehicles like cars, trucks, and buses that need to navigate through snow-covered or icy roads where regular tire traction may be insufficient. Traction chains come in various designs and materials, providing a temporary solution for challenging road conditions and enhancing safety during winter driving.

The major global manufacturers of Traction Chains include Pewag, Rud, Peerless, Nordic Traction Group, Trygg, Laclede Chain, Maggi Group, Bohu, Ottinger, Veriga Lesce, Hangzhou Feifei Chain, Gowin, etc. The global players competition landscape in this report is divided into three tiers.
