Research Summary

A trampoline is a recreational device consisting of a strong fabric stretched over a steel frame, supported by coiled springs, where individuals can bounce and perform various acrobatic movements. Trampolines come in various shapes and sizes, from backyard models for recreational use to professional-grade trampolines used in gymnastics and other sports. The elasticity provided by the springs allows users to propel themselves into the air and experience a sensation of weightlessness before returning to the fabric surface. Trampolining is not only a popular form of entertainment but also a recognized sport with competitions that include routines of flips, twists, and somersaults performed on the trampoline.
