Research Summary

Transfection reagents are substances or formulations used in molecular biology and biotechnology to introduce nucleic acids, such as DNA or RNA, into eukaryotic cells. This process, known as transfection, enables the delivery of genetic material into cells, allowing researchers to manipulate gene expression, study cellular functions, and potentially develop therapeutic applications. Transfection reagents play a crucial role in facilitating the uptake of nucleic acids by cells, overcoming the cellular membrane barrier. These reagents can be cationic lipids, polymers, or other specialized formulations designed to form complexes with nucleic acids, promoting their efficient transport into the target cells. The choice of transfection reagent depends on the cell type, the nature of the nucleic acid cargo, and the specific requirements of the experiment or application. Transfection technology is fundamental in molecular biology research, genetic engineering, and the development of novel gene-based therapies.

The major global manufacturers of Transfection Reagents include Thermo Fisher Scientific, Promega, Roche, Qiagen, Polyplus-transfection, Bio-Rad Laboratories, Lonza
