Research Summary

Transformer insulation paper, pressboard, and components are critical materials used to provide electrical insulation and mechanical support in power and distribution transformers. Insulation paper is typically made from high-purity cellulose fibers, offering excellent dielectric properties and resistance to thermal and electrical stresses. Pressboard, a denser and more rigid material, is used for structural support and insulation in transformer windings and core components. These materials are often used to create various insulating components such as spacers, barriers, and cylinders, ensuring the safe and efficient operation of transformers by preventing short circuits and minimizing electrical losses. Their durability, reliability, and high insulating performance are essential for maintaining transformer longevity and operational safety.

The major global suppliers of Transformer Insulation Paper, Pressboard and Component include Weidmann, Hitachi Energy, Delfort, Hunan Guangxin Technology,

Huisheng Group, DuPont, KREMPEL GmbH, Changzhou Yingzhong Electrical, Liaoning Xingqi Electric Material, Taizhou Xinyuan Electrical Equipment, Miki Tokushu Paper, etc. The global players competition landscape in this report is divided into three tiers.
