Research Summary

A trash pump is a type of centrifugal pump specifically designed for handling liquids containing solid particles or debris, such as mud, slurry, or waste water with large solids. These pumps are characterized by their robust construction and the ability to pass solids of a certain size without clogging or damage. Trash pumps are commonly used in construction, mining, agriculture, and wastewater management applications where the pumping of water with high solids content is required. They typically feature an impeller with wide passages and a large pump casing to accommodate the passage of solids.
