Research Summary

Trehalose is a disaccharide sugar composed of two glucose molecules linked together. It is naturally occurring in various organisms, including bacteria, fungi, plants, and some invertebrates, serving as a source of energy and a protective agent against environmental stress. Trehalose has gained attention for its unique properties, such as its ability to preserve the structural integrity of cells and biological molecules during desiccation or freezing. This has led to its use in a variety of applications, including the food industry as a sweetener and stabilizer, as well as in pharmaceuticals and cosmetics for its protective and moisturizing qualities. Trehalose's role in stress tolerance and its compatibility with biological systems make it a versatile compound with diverse applications in different fields.
