Research Summary

Trichloroisocyanuric Acid (TCCA) is a chemical compound with the molecular formula $C_3Cl_3N_3O_3$. It is a white, crystalline powder or granular substance that contains chlorine, making it a powerful disinfectant and sanitizer. TCCA is widely used for water treatment applications, particularly in swimming pools and drinking water purification. As a source of chlorine, it effectively eliminates bacteria, viruses, and algae, ensuring the maintenance of clean and safe water. TCCA is also employed in industrial processes for sterilization and sanitation. Its slow release of chlorine makes it suitable for continuous disinfection over an extended period. However, it is essential to handle TCCA with care due to its chlorine content, and its usage is subject to regulatory guidelines to ensure safety and proper water treatment practices.
