Research Summary

Triple offset butterfly valves are advanced industrial valves designed for controlling the flow of fluids in pipelines. Unlike traditional butterfly valves, triple offset butterfly valves feature three offsets that eliminate rubbing and provide a tight, leak-free seal. The three offsets include a shaft offset from the centerline of the disc, an eccentric cone shape in the sealing surface, and a rotation axis offset from the centerline of the valve body. This design minimizes wear and reduces friction during operation, enhancing the valve's durability and extending its lifespan. Triple offset butterfly valves are commonly used in applications where tight shut-off, high-pressure resistance, and reliability are critical, such as in the oil and gas, chemical, and power industries. Their design allows for bidirectional and bubble-tight sealing performance, making them suitable for various challenging and high-performance applications.

The major global manufacturers of Triple Offset Butterfly Valves include ADAMS Armaturen GmbH, Cameron, Emerson, L&T Valves, Zwick, The Weir Group, Bray International, Hobbs Valve, Pentair Valves & Controls, JC Valves, Velan, Dembla
