### Research Summary

Tris(hydroxymethyl)aminomethane, commonly known as Tris or THAM, is an organic compound with the chemical formula  $(\text{HOCH}_2)_3\text{CNH}_2$ . It is a buffering agent and a base widely used in biochemistry and molecular biology laboratories. Tris is known for its ability to maintain a stable pH level in solutions, making it a popular choice in various biochemical and biotechnological applications. Its buffering capacity is particularly valuable in experiments where maintaining a specific pH range is crucial for the stability and functionality of enzymes and other biological molecules. Tris is also used in the preparation of electrophoresis buffers, protein isolation, and nucleic acid research. Due to its versatile buffering properties and minimal interference with biological processes, Tris has become a standard reagent in many laboratory protocols.
