Research Summary

Trocars are surgical instruments designed for minimally invasive procedures, particularly in laparoscopic surgery. They consist of a pointed, sharp-tipped tube or cannula with a retractable sleeve called an obturator. Trocars are used to create access points, known as trocar sites, through the abdominal wall or other anatomical structures during laparoscopic surgery. The obturator is initially inserted into the trocar to facilitate penetration, and once the trocar is in place, the obturator is removed, leaving the cannula in position. Trocars provide a pathway for the insertion of other laparoscopic instruments such as cameras and surgical tools, allowing surgeons to perform various procedures without the need for large incisions. Their use minimizes trauma to tissues, accelerates patient recovery, and reduces the risk of complications associated with traditional open surgery.

The major global manufacturers of Trocars include Medtronic, B. Braun, Johnson & Johnson, Rumex International, Pajunk, Cooper Medical, Stryker, Geuder AG, Geuder, Ambler Surgical, Applied Medical, etc. The global players competition landscape in this report is divided into three tiers.
