### Research Summary

Trommel screens are cylindrical drum-shaped machines used in various industries for the separation and classification of materials. The drum is typically perforated with apertures of different sizes, allowing smaller particles to pass through while larger materials are retained. Trommel screens are commonly used in waste processing, composting, mining, and other applications where sorting and sizing of materials are required. As the drum rotates, the material inside is lifted and tumbled, facilitating the separation process. The size and configuration of the perforations in the drum can be adjusted to achieve specific particle size classifications. Trommel screens are efficient for screening a wide range of materials, from soil and sand to municipal waste and recyclables, making them valuable tools in waste management and material processing operations.

The major global manufacturers of Trommel Screens include VERMEER, Eggersmann GmbH, McCloskey International, Terex, McLanahan Corporation, Pronar, Hongxing, MDS, Zemmler, Stelex Engineering Ltd, EDGE, Doppstadt, TECP, Zhengzhou Mning
