Research Summary

A Truck Mounted Attenuator (TMA) is a safety device designed to reduce the severity of accidents involving vehicles, particularly in highway construction zones. It consists of a specially engineered vehicle, typically a truck, equipped with an attenuator—a crash cushion made of impact-absorbing materials such as foam or metal honeycomb. The TMA is mounted on the rear of a vehicle, acting as a buffer zone between moving traffic and stationary or slow-moving construction vehicles or workers. In the event of a collision, the attenuator absorbs the kinetic energy of the impacting vehicle, minimizing the risk of injury to the occupants and reducing damage to both vehicles involved. TMAs play a crucial role in enhancing work zone safety by providing a protective barrier and alerting drivers to potential hazards, ultimately mitigating the impact of accidents and improving overall road safety.

The major global manufacturers of Truck Mounted Attenuator (TMA) include Lindsay Corporation, Trinity Highway, Verdegro, Stuer-Egghe, Traffix Devices, Gregory Industries, EBO van Weel, Smart Air Chamber(SAC), HIT HOFMAN, Cansinga
