### Research Summary

Truck parking air conditioning equipment refers to specialized systems designed to provide cooling and climate control for parked trucks, especially those equipped with sleeping compartments or cabins. These systems are commonly used in long-haul trucks, RVs, and other commercial vehicles where drivers may need to rest or sleep during breaks or overnight stops. Truck parking air conditioning units are typically roof-mounted or installed externally on the vehicle, and they operate independently of the truck's engine, often using a separate power source such as batteries or a generator. These systems usually include a compressor, condenser, evaporator, and blower fan, similar to conventional air conditioning systems, but are designed to be compact and efficient for use in vehicles. They help maintain comfortable temperatures inside the truck cabin, providing relief from heat, humidity, and extreme weather conditions, thus improving driver comfort and rest quality during breaks. Some advanced systems may also include features such as programmable thermostats, air filtration, and energy-saving modes to enhance user experience and efficiency.

The major global manufacturers of Truck Parking Air Conditioning Equipment include Haier, Hisense, Zhongcheng New Energy, Bergstrom, Hetian Electric Vehicle, Dometic, Colku, Eberspacher, Webasto, Gree, Midea, Changhong, Henan Yierfu, KME, etc. The global players competition landscape in this report is divided into three tiers.
