Research Summary

A trunking system, in the context of telecommunications, refers to a network infrastructure that enables the efficient routing and management of multiple communication channels or circuits within a larger network. Trunking systems are commonly used in telephone and radio communications to handle the flow of information between different locations or endpoints. These systems optimize the use of available resources by consolidating multiple communication channels into a single, high-capacity link. Trunking systems can be analog or digital and are often employed in private branch exchange (PBX) systems for telephone networks, as well as in radio systems for public safety or commercial purposes. They contribute to effective communication by ensuring a streamlined and organized flow of data, allowing for better utilization of network resources and improved connectivity between users.

The major global suppliers of Trunking System include Philips Lighting Holding, GE lighting, Havells Sylvania (Shanghai Feilo Acoustics), Siteco Beleuchtungstechnik GmbH (OSRAM), Zumtobel Group, TRILUX Group Management GmbH, Luxon LED,
