Research Summary

Trypsin and Lys C are protease enzymes commonly used in proteomics and protein analysis. Trypsin is a serine protease that cleaves peptide bonds at the carboxyl side of the amino acids lysine and arginine. Lys C, on the other hand, is another protease that specifically cleaves peptide bonds at the carboxyl side of lysine residues. When used together in tandem digestion, trypsin and Lys C can complement each other, resulting in increased protein sequence coverage. This combination enhances the efficiency of protein digestion, breaking down proteins into smaller peptides for subsequent analysis by mass spectrometry or other techniques. Tandem digestion with trypsin and Lys C is a common approach in bottom-up proteomics, allowing for a more comprehensive and accurate identification of peptides and proteins in complex biological samples.

The major global manufacturers of Trypsin and Lys C include Thermo Fisher, Merck, Corning, Cytiva, Bioseutica, Lonza, Sartorius, BBI Group, Geyuantianrun Bio-tech, Linzyme Biosciences, etc. The global players competition landscape in this report is divided into three tiers.
