### Research Summary

Tryptophan is an essential amino acid, meaning that the human body cannot synthesize it and must obtain it through dietary sources. It plays a crucial role in various physiological processes, serving as a precursor for the synthesis of serotonin, a neurotransmitter involved in mood regulation, and melatonin, a hormone that regulates sleep-wake cycles. Found in protein-rich foods such as poultry, fish, dairy products, and some plant-based sources, tryptophan contributes to overall protein synthesis and is vital for maintaining proper growth, development, and overall well-being. Additionally, it is often associated with the drowsiness sometimes experienced after consuming a large meal, although its role in this context is more complex and influenced by other dietary factors.

The major global manufacturers of Tryptophan include CJ CheilJedang, Henan Julong, Ajinomoto, Evonik, Meihua Group, Fufeng Group, etc. The global players competition landscape in this report is divided into three tiers.
