Research Summary

Tubular heaters are electric heating elements characterized by their cylindrical, tube-like shape. These heaters consist of a metal sheath, typically made of materials like stainless steel or Incoloy, which encases a resistive heating element. The internal heating element, often composed of nickel-chromium or iron-chromium-aluminum alloys, generates heat when an electric current passes through it. Tubular heaters are versatile and widely used in various industrial, commercial, and residential applications for heating air, liquids, and solids. They are employed in processes such as water heating, air heating, ovens, industrial furnaces, and more. The robust and customizable design of tubular heaters allows them to withstand high temperatures, corrosive environments, and heavy-duty use, making them a reliable choice for diverse heating applications.

The major global manufacturers of Tubular Heaters include Watlow, Backer, Chromalox, Friedr. Freek, ACIM Jouanin, Keller Ihne & Tesch, Rotfil, Vulcanic, Herbst, Heatrex, Wattco, Thermo Products, Mahendra Thermo, HELKRA, Durex Industries,
