### Research Summary

Tubular solenoids are electromagnetic devices designed for linear motion applications, converting electrical energy into mechanical motion. They consist of a coil of wire wound around a movable ferrous core, typically made of iron or steel, housed within a tubular structure. When an electric current passes through the coil, it generates a magnetic field that attracts or repels the ferrous core, causing linear motion. Tubular solenoids find application in a variety of industries and devices, such as in locks, valves, medical equipment, and automotive systems, where a controlled and reliable linear actuation is required. Their tubular design provides a protective housing for the internal components and allows for easy integration into various systems, making them versatile components in electromechanical systems that require precise linear movement.

The major global manufacturers of Tubular Solenoids include Johnson Electric, TDS, Magnet Schultz Ltd, Shindengen, Delta, Kendrion, Dongguan Sifan, Shenzhen ZONHEN Electric, Deltrol Corp, Dongguan Boshun, Curtiss-Wright, Shenzhen Zanty, NSF Controls, ROSS DECCO, Shenzhen Yaxin, Kelco Industries, etc. The global
