Research Summary

Tungsten hexafluoride (WF₆) is a chemical compound composed of tungsten and fluorine atoms. It is a volatile and highly reactive compound that exists as a gas at room temperature. Tungsten hexafluoride is commonly used in the semiconductor industry as a tungsten source for the deposition of thin films during the fabrication of integrated circuits. In processes such as chemical vapor deposition (CVD), WF₆ is introduced into a reactor where it reacts with other precursors to form tungsten thin films on semiconductor wafers. The high reactivity of tungsten hexafluoride makes it a suitable precursor for depositing uniform and adherent tungsten layers, an essential step in the production of microelectronic devices. However, it is important to handle tungsten hexafluoride with caution due to its corrosive and toxic nature. As technology evolves, there may be further developments in the use of tungsten hexafluoride or alternative processes in the semiconductor manufacturing industry.

The major global manufacturers of Tungsten Hexafluoride include Linde, Air Products and Chemicals, CSIC, SK Materials, Taiyo Nippon Sanso, etc. The global players
