Research Summary

A turbo expander is a device used to recover energy from high-pressure gas or vapor streams by expanding them through a turbine. This expansion converts the kinetic energy of the fluid into mechanical work, which can then be used to generate electricity or provide mechanical drive for other processes. Turbo expanders are commonly employed in natural gas processing plants, cryogenic air separation units, and other industrial applications where high-pressure gas or vapor needs to be expanded and energy recovered. The process not only produces power but also helps in reducing the pressure of the fluid stream, making it suitable for subsequent stages in a process. Turbo expanders play a crucial role in maximizing energy efficiency and minimizing waste in various industrial operations.

The major global manufacturers of Turbo Expander include Cryostar, Atlas Copco, GE(Baker Hughes), Air Products, ACD, L.A.
