Research Summary

A turbocharger is a forced induction device that enhances the performance and efficiency of an internal combustion engine by increasing the intake air pressure and density. It consists of a pair of fans - a turbine and a compressor - mounted on a common shaft. The exhaust gases from the engine drive the turbine, causing it to spin. This, in turn, rotates the compressor, which draws in and compresses air before delivering it to the engine's combustion chambers. By increasing the air pressure and density, a turbocharger allows the engine to burn more fuel and achieve higher power output. Turbochargers are commonly used in automotive and truck engines, as well as in various other applications such as marine engines and power generators. They are a key technology for improving engine efficiency, reducing emissions, and enhancing overall performance.

The major global manufacturers of Turbocharger include ABB, MHI, MAN Diesel & Turbo, IHI, Cummins, Honerwell, Wabtec Corporation, Garrett, KBB, TEL, Hunan Tyen, Fuyuan Turbochargers, Kangyue, Xinde Make, Roshow, BorgWarner, CSSC, etc. The
