Research Summary

Two-wheeler lighting refers to the lighting systems installed on motorcycles, scooters, bicycles, and other two-wheeled vehicles. These lighting components serve crucial functions for both visibility and safety. Common elements include headlights, taillights, turn signals, brake lights, and sometimes additional auxiliary lights. Headlights provide illumination for the rider to see the road ahead, while taillights and brake lights enhance the vehicle's visibility to other road users. Turn signals indicate the rider's intention to change direction, contributing to overall traffic safety. Two-wheeler lighting is not only essential for nighttime riding but also plays a vital role in daytime visibility. The design and functionality of these lighting systems are regulated by transportation authorities to ensure standardized safety measures. Advances in technology have led to the incorporation of energy-efficient LED lighting in modern two-wheelers, contributing to improved visibility and reduced power consumption.
