Research Summary

Tyrosinase is an enzyme that plays a crucial role in the production of melanin, the pigment responsible for the color of skin, hair, and eyes. It catalyzes the conversion of the amino acid tyrosine into melanin through a process called melanogenesis.

Tyrosinase facilitates the hydroxylation of tyrosine to form DOPA (3,4-dihydroxyphenylalanine) and then catalyzes the oxidation of DOPA to DOPAquinone, which eventually leads to the formation of melanin. This enzyme is found in various organisms, including humans, and is especially significant in the skin, where it helps protect against UV radiation by darkening the skin in response to sun exposure. In addition to its role in pigmentation, tyrosinase is also involved in other biological processes, including wound healing and immune responses. However, abnormal tyrosinase activity can lead to conditions such as albinism (lack of melanin) or hyperpigmentation disorders like melasma.

The major global manufacturers of Tyrosinase include Merck, Glentham Life Sciences, Innovative Research, RayBiotech, Leica Biosystems, Enzo Biochem, BIO SB, Beijing Baiaolaibo, Solarbio, Aladdin, Maokang Bio, Sinopharm Chemical Reagent, etc. The
