### Research Summary

A UAV jammer, short for Unmanned Aerial Vehicle jammer, is a device designed to disrupt or neutralize the operation of unmanned aerial vehicles (UAVs), commonly known as drones. These jammers work by emitting radio frequency signals that interfere with the communication between the drone and its remote control or navigation system. UAV jammers can operate on various frequencies, including GPS, Wi-Fi, and radio bands, effectively blocking the drone's ability to receive commands or maintain its position through satellite navigation. They are employed for security and defense purposes to counter unauthorized or potentially malicious drone activities, such as trespassing in restricted airspace or conducting surveillance. UAV jammers play a role in protecting sensitive areas, events, or critical infrastructure from potential threats posed by the misuse of unmanned aerial vehicles.

The major global manufacturers of UAV Jammer include Avnon HLS(SKYLOCK), SRC, Raytheon, DroneShield, Blighter Surveillance, HP Marketing & Consulting(Dedrone), Israel Aerospace Industries, Mctech Technology, Stratign, Digital RF, MC2
