Research Summary

A UAV (Unmanned Aerial Vehicle) subsystem refers to a distinct and specialized component or module within the overall architecture of an unmanned aerial system. UAVs are complex platforms with various interconnected parts, and subsystems are designed to perform specific functions or tasks. These subsystems can include components such as the propulsion system (engines and motors), avionics (navigation, communication, and control systems), sensors (cameras, LiDAR, GPS), power systems (batteries or fuel cells), and payload systems (equipment or devices for specific mission objectives). Each UAV subsystem contributes to the overall functionality and performance of the drone, allowing it to carry out specific missions or tasks effectively. Integration and coordination among these subsystems are crucial for the successful operation of a UAV, whether it's for applications like surveillance, photography, agriculture, or other specialized tasks.

The major global suppliers of UAV Subsystem include Aerovironment, Boeing, Elbit Systems, Lockheed Martin, Northrop grumman, Textron, Alpha Unmanned Systems, BAE Systems, IAI, etc. The global players competition landscape in this report is divided
