Research Summary

An ultracentrifuge is a laboratory instrument designed for high-speed centrifugation, capable of rotating samples at extremely high speeds to separate particles based on their density. The ultracentrifuge achieves this by using ultracentrifugation, a technique that involves subjecting samples to centrifugal forces much greater than those generated by standard centrifuges. Ultracentrifuges are crucial in various scientific and research applications, including molecular biology, biochemistry, and virology, where they are used to separate and analyze particles such as proteins, nucleic acids, and organelles. The high rotational speeds of ultracentrifuges, often reaching over 100,000 revolutions per minute (rpm), allow for precise separation and fractionation of particles based on their sedimentation rates. This technology plays a pivotal role in advancing our understanding of cellular and molecular biology by enabling the isolation and study of subcellular components.

The major global manufacturers of Ultracentrifuge include Beckman Coulter, Thermo Fisher Scientific, Eppendorf AG, Hettich Instruments, Hunan Xiangyi Laboratory

Instrument Development, KUBOTA, Haier Biomedical, Sigma Laborzentrifugen, OHAUS, BIOBASE, DLAB Scientific, Hanil Scientific, etc. The global players competition landscape in this report is divided into three tiers.
