Research Summary

Ultrafast laser processing is a technology that utilizes extremely short pulse durations in the femtosecond range (1 femtosecond equals 10^{-15} seconds) to perform various materials processing tasks with unparalleled precision. These ultrafast lasers generate intense and focused beams of light that interact with materials on extremely short timescales, minimizing heat transfer to the surrounding areas. This enables precise and minimal damage processing, making it suitable for applications like micromachining, surface structuring, and medical procedures. Ultrafast laser processing is widely used in industries such as semiconductor manufacturing, electronics, and medical devices, where the demand for high precision and minimal thermal effects is crucial. The ultrafast nature of these lasers allows for intricate and complex operations at the micro and nanoscale, making them valuable tools for cutting-edge research and advanced manufacturing processes.

The major global manufacturers of Ultrafast Laser Processing include Han's Laser, Disco, HGTECH, Dongguan Strong Laser, EO Technics, Coherent, IPG, DR Laser,
