Research Summary

Ultrafast lasers are a class of lasers that emit extremely short pulses of light, typically in the femtosecond (10^{-15} seconds) or picosecond (10^{-12} seconds) range. The short pulse durations of ultrafast lasers allow for highly precise and controlled interactions with materials. These lasers are employed in various scientific, industrial, and medical applications. In scientific research, ultrafast lasers are used for studies in fields like physics, chemistry, and biology, enabling researchers to explore phenomena on incredibly short timescales. In industrial settings, they find application in micromachining, materials processing, and the fabrication of microstructures with high precision. Additionally, ultrafast lasers are used in medical procedures such as eye surgery, where their precision is crucial. The ability of ultrafast lasers to deliver intense and focused pulses of light in an extremely short time frame makes them valuable tools in advancing technologies across multiple disciplines.

The major global manufacturers of Ultrafast Lasers include Trumpf, Coherent, IPG Photonics, Newport, Amplitude Laser Group, Novanta, Lumentum, IMRA America, NKT
