Research Summary

Ultrafine precipitated calcium carbonate (PCC) is a specialized form of calcium carbonate with extremely small particle sizes, typically in the nanometer range. Produced through advanced precipitation processes, this ultrafine variant of calcium carbonate exhibits unique characteristics, including a high surface area and improved dispersion properties. Due to its fine particle size, ultrafine PCC is widely used as a functional filler and reinforcement in various industries, including plastics, rubber, paints, and coatings. Its incorporation enhances properties such as strength, stiffness, and rheological behavior in the final products. Additionally, ultrafine PCC finds applications in the paper and pharmaceutical industries, contributing to improved paper quality and serving as a calcium supplement in pharmaceutical formulations. The precise control over particle size and morphology makes ultrafine precipitated calcium carbonate a versatile material with diverse applications across multiple industrial sectors.
