Research Summary

An ultrasonic sensor is a device that uses ultrasonic waves for distance measurement and object detection. These sensors typically consist of a transceiver that emits ultrasonic waves and receives the reflected signals. The sensor calculates the distance to an object based on the time it takes for the ultrasonic waves to travel to the object and back, utilizing the speed of sound in the air. Ultrasonic sensors are widely used in various applications, including industrial automation, robotics, automotive systems (such as parking sensors), and consumer electronics. Their non-contact nature, accuracy, and ability to function in different environmental conditions make them suitable for tasks such as presence detection, level monitoring, and obstacle avoidance.

The major global manufacturers of Ultrasonic Sensor include Esaote, Telemed Medical Systems, Sonosite, Samsung, Carestream, BK Ultrasound, ZONARE Medical Systems, AMD Global Telemedicine, Broadsound Corporation, Meditech Equipment, etc. The global players competition landscape in this report is divided into three tiers.
