Research Summary

An ultrasound biopsy needle is a specialized medical tool used in minimally invasive procedures to obtain tissue samples for diagnostic purposes. Designed to be used under ultrasound guidance, these needles integrate with ultrasound imaging technology to precisely target and sample suspicious or abnormal tissues within the body. The needle typically has a slender, hollow design that allows it to be guided to the specific area of interest while ultrasound imaging provides real-time visualization. Once accurately positioned, the biopsy needle is used to extract a small tissue sample for pathological analysis. This procedure is commonly employed in the diagnosis of various medical conditions, including tumors, cysts, and other abnormalities, providing valuable information for treatment planning and patient care. The use of ultrasound guidance enhances the accuracy of the biopsy procedure and reduces the need for more invasive surgical interventions.

The major global manufacturers of Ultrasound Biopsy Needle include Boston Scientific, Covidien, Cook Medical, Olympus, CONMED, Medi-Globe GmbH, Micro-Tech China,
