Research Summary

An ultraviolet-visible (UV-Vis) spectrometer is a scientific instrument used to analyze the absorption and transmission of light in the ultraviolet and visible regions of the electromagnetic spectrum. This versatile instrument employs a light source that emits a broad spectrum of wavelengths, which is directed through a sample. The spectrometer then measures the intensity of light that passes through the sample, revealing information about the sample's composition and concentration. UV-Vis spectrometers are widely used in chemistry, biochemistry, environmental science, and other fields for applications such as quantitative analysis of chemicals, identification of substances based on their absorption spectra, and monitoring chemical reactions. These spectrometers play a crucial role in research, quality control, and various analytical processes, providing valuable insights into the properties of materials and compounds.

The major global manufacturers of Ultraviolet-Visible Spectrometer include Agilent Technologies, Thermo Fisher Scientific, Eppendorf, Shimadzu Corporation, Danaher, PerkinElmer, Hitachi, Analytik Jena, JASCO International, Biochrom, Xylem, GE
