Research Summary

An Underfloor Air Distribution System (UFAD) is a HVAC (Heating, Ventilation, and Air Conditioning) design approach where conditioned air is delivered through the floor, typically raised access floor panels, to distribute heating or cooling within a building space. In this system, air travels from the plenum beneath the floor through floor diffusers, creating a stratified air layer with a more even temperature distribution. UFAD systems offer several advantages, including improved indoor air quality, enhanced thermal comfort, and increased energy efficiency. By delivering air closer to the occupied zone, UFAD systems can provide more precise control over the indoor environment and accommodate flexible office layouts. The underfloor distribution also allows for better integration with building technologies such as raised floors for cable management and easy access to electrical and data services. This design approach is commonly employed in commercial buildings seeking energy-efficient and adaptable HVAC solutions.

The major global suppliers of Underfloor Air Distribution System include Johnson
