Research Summary

Underwater Wireless Communication (UWC) refers to the transmission of data through electromagnetic or acoustic waves in aquatic environments. Unlike terrestrial wireless communication, the challenges in underwater settings include high attenuation, limited bandwidth, and signal dispersion. Various techniques are employed for UWC, such as acoustic communication using sound waves, electromagnetic communication using radio frequencies, or optical communication using light. This technology finds applications in underwater sensor networks, oceanographic research, offshore industries, and remotely operated vehicles (ROVs). Developing reliable and high-speed underwater communication systems is essential for enhancing the capabilities of underwater exploration, monitoring, and intervention, contributing to advancements in marine science and industry.

The major global suppliers of Underwater Wireless Communication (UWC) include Kongsberg Gruppen, Saab AB, Teledyne Technologies, Ultra Electronics Maritime
