Research Summary

Unmanned Surface Vehicles (USV) are autonomous or remotely operated watercraft that navigate the water's surface without a human crew on board. These vehicles can vary in size and design, from small robotic boats to larger vessels. USVs are equipped with sensors, communication systems, and navigational tools, allowing them to perform a range of tasks autonomously or under remote control. Applications of USVs include oceanographic research, environmental monitoring, maritime surveillance, and tasks in offshore industries. They offer cost-effective and efficient solutions for data collection, mapping, and surveillance in marine environments, reducing the need for human presence on the water and providing a versatile platform for various maritime operations.

The major global manufacturers of Unmanned Surface Vehicles (USV) include ASV Unmanned Marine Systems, Teledyne Technologies, Textron, Atlas Elektronik, ECA Group, Searobotics, Elbit Systems, Seebyte, 5G International, etc. The global players competition landscape in this report is divided into three tiers.
