### Research Summary

Uranium by Underground Leaching, also known as In-Situ Recovery (ISR) or In-Situ Leaching (ISL), is a method of extracting uranium from underground ore deposits without the need for traditional mining. In this process, a solution, typically a mix of water and chemicals such as oxygen or bicarbonate, is injected into the uranium-bearing rock through wells drilled into the ground. The solution dissolves the uranium from the ore, and the uranium-rich liquid is then pumped to the surface for processing. This method is more environmentally friendly compared to conventional mining, as it minimizes surface disruption, reduces waste, and lowers the overall environmental impact while allowing for the extraction of uranium in a more cost-effective manner.

The major global manufacturers of Uranium by Underground Leaching include Cameco, Peninsula Energy, Kazatomprom, Orano, KATCO, Denison Mines, Uranium Energy Corp, Paladin Energy, Ur-energy, enCore Energy, Energy Fuels, Nuclear Fuels, Rosatom, CNNC, etc. The global players competition landscape in this report is divided
