Research Summary

A ureteroscope is a medical instrument used in urology for the visual examination and treatment of the ureter, the tube that carries urine from the kidney to the bladder. This thin, flexible or rigid endoscope is equipped with a light source and a camera that allows urologists to directly visualize the interior of the ureter and surrounding structures. Ureteroscopy is a common procedure where the ureteroscope is inserted through the urethra and advanced up into the ureter. It is often employed for diagnosing and treating conditions such as kidney stones, tumors, or ureteral strictures.
