Research Summary

A uroflowmetry system is a medical diagnostic tool used to assess the flow rate and patterns of urine during voiding or urination. It is commonly employed in urology to evaluate the functioning of the lower urinary tract, particularly the bladder and urethra. The system typically involves a specialized device or apparatus that measures and records the rate of urine flow as the patient voids into a calibrated receptacle. Uroflowmetry provides valuable information about the urinary system's efficiency, helping diagnose conditions such as urinary obstruction, overactive bladder, or prostate-related issues. The test is non-invasive and is often part of the comprehensive evaluation of urinary function, aiding healthcare professionals in determining appropriate treatment plans for individuals with urological concerns.
