Research Summary

A UV disinfection lamp is a device designed to emit ultraviolet (UV) light, specifically in the UV-C range, to disinfect air, water, or surfaces by inactivating or killing microorganisms such as bacteria, viruses, and other pathogens. UV-C light, with a wavelength between 200 and 280 nanometers, is particularly effective in damaging the DNA or RNA of microorganisms, preventing their ability to replicate. UV disinfection lamps are commonly used in healthcare settings, water treatment plants, laboratories, and various industries to provide a chemical-free and efficient means of sterilization. These lamps come in different designs, including handheld devices, stationary fixtures, and portable units, enabling their use in diverse applications where the reduction of microbial contamination is crucial for maintaining hygiene and preventing the spread of infections.
