### Research Summary

A UV inkjet printer is a printing device that employs ultraviolet (UV) curable inks and inkjet technology to create high-quality prints on various surfaces. Unlike traditional inkjet printers that use solvent-based inks, UV inkjet printers use UV-curable inks that harden instantly when exposed to UV light. This curing process allows for rapid printing on a wide range of substrates, including paper, plastics, glass, metal, and more. UV inkjet printing offers vibrant and durable prints with excellent adhesion to different materials. This technology is widely used in applications such as signage, packaging, labels, and promotional materials, providing fast and efficient printing solutions for both indoor and outdoor use. The UV curing feature also contributes to environmentally friendly printing, as it eliminates the need for solvents and reduces emissions of volatile organic compounds (VOCs).

The major global manufacturers of UV Inkjet Printer include EPSON, Canon, Durst, Fujifilm, EFI, MIMAKI, JHF, Roland, MUTOH, KINGT, Domino Digital Printing, Agfa Graphics, Techwin, HP, etc. The global players competition landscape in this report is
