### Research Summary

A UV phone sanitizer is a device designed to disinfect smartphones and other small items using ultraviolet (UV) light, specifically UV-C light, which has germicidal properties. By emitting UV-C rays, the sanitizer destroys the DNA or RNA of bacteria, viruses, and other microorganisms, rendering them inactive. These sanitizers typically consist of a compact box or case where the phone is placed, and the UV light is evenly distributed over the surfaces for a designated period. UV phone sanitizers are popular for their ability to provide a chemical-free, efficient, and portable solution to reduce the risk of contamination from frequently touched devices.
