Research Summary

V2X, or Vehicle-to-Everything, refers to a technology that enables communication and data exchange between vehicles (V2V), as well as between vehicles and other entities like infrastructure (V2I), pedestrians (V2P), and the broader environment (V2X). In the context of automotive applications, V2X technology plays a pivotal role in creating a connected and intelligent transportation ecosystem. Vehicles equipped with V2X capabilities can share real-time information about their location, speed, and other relevant data with nearby vehicles and infrastructure. This communication helps enhance road safety by providing early warnings about potential hazards, optimizing traffic flow, and supporting the development of advanced driver assistance systems (ADAS) and autonomous driving technologies. V2X technology holds the promise of improving overall traffic efficiency, reducing accidents, and contributing to the evolution of smart and interconnected transportation systems.
