Research Summary

Vacuum auxiliary materials are specialized products used to support and enhance the performance of vacuum systems across various industrial and scientific applications. These materials include vacuum greases, oils, sealants, and gaskets, which are essential for maintaining the integrity and efficiency of vacuum environments. They help ensure airtight seals, lubricate moving parts to reduce friction, and prevent contamination within the vacuum chamber. Vacuum greases and oils, for instance, are formulated to withstand low pressures and high temperatures without evaporating or decomposing. Sealants and gaskets are designed to provide reliable sealing solutions for flanges and joints. The use of these auxiliary materials is critical in applications such as semiconductor manufacturing, vacuum coating, space simulation, and scientific research, where maintaining a controlled vacuum environment is paramount.

The major global manufacturers of Vacuum Auxiliary Material include Solvay, Flextech, Vac Innovation, Fibre Glast, PRO-VAC, Diatex, Shanghai Leadgo-Tech, Airtech International, Bodotex, METYX Composites, Castro Composites, Youwei New
