Research Summary

Vacuum concentrators, also known as centrifugal evaporators or speed vacuums, are laboratory instruments used for the rapid evaporation of solvents from samples. They operate under vacuum conditions to lower the boiling point of the solvent, facilitating quicker and more efficient solvent removal without exposing the sample to elevated temperatures. Typically employed in molecular biology, biochemistry, and chemistry laboratories, vacuum concentrators are crucial for the concentration and preparation of samples for further analysis. They consist of a centrifuge rotor that holds sample tubes, and a vacuum system that reduces the pressure, allowing solvents to evaporate at lower temperatures. Vacuum concentrators are valuable tools for the concentration of biomolecules, such as DNA, RNA, proteins, and other samples, contributing to the efficiency and accuracy of various laboratory processes.

The major global manufacturers of Vacuum Concentrators include Thermo Fisher Scientific, Labconco, Eppendorf, SP Industries, Inc., Martin Christ, LaboGene, Gyrozen, Beijing Jiaimu, Hunan Herexi, Beijing Boyikang, etc. The global players competition
