Research Summary

A vacuum degasser is an industrial device used to remove unwanted gases, primarily dissolved gases such as oxygen and carbon dioxide, from liquids. This process is crucial in various industries, particularly in applications where the presence of gases can affect the performance or integrity of the liquid, such as in water treatment, oil and gas drilling, and beverage production. Vacuum degassers operate by creating a low-pressure environment, typically through a vacuum pump, which encourages the release of dissolved gases from the liquid. The degassed liquid is then returned to its original system. Common types of vacuum degassers include those used in water treatment plants to remove gases from drinking water and those employed in the oil and gas industry to enhance drilling fluid properties. Efficient degassing is essential for maintaining the quality and functionality of liquids in diverse industrial processes.

The major global manufacturers of Vacuum Degasser include M-I Swaco, Reflex, IMI(Hydronic Engineering), Spirotech, Elgin, Derrick, TSC Group, Flacmo, GN Solids Control Co., Ltd, DC Solid Control, etc. The global players competition landscape in this
